📖 README			

Exercise Questions

Answer :

1. Code Execution & Output

After running your index.js script:

- What exact text does the console display when the document is inserted?
- What `_id` value is automatically assigned to the document?

```
PS D:\UTeM\TAHUN 2-2\DATABASE\LAB1> node index.js
Connected to MongoDB!
Document inserted
Query result: {
  _id: new ObjectId('67da19c017ba0b9468b1a137'),
  name: 'Alice',
  age: 25
}
```

2. Modify and Observe

Change the name field in index.js to your own name and the age to your birth year. Run the script again.

- What **new** `_id` is generated for this document?

```
PS C:\Users\user\OneDrive\Desktop\database\LAB1> node index.js
Connected to MongoDB!
Document inserted
Query result: {
  _id: new ObjectId('67dca40ec3dded5488197cc6'),
  name: 'Anis Hafifza',
  age: 2002
}
```

- What error occurs if you forget to call **await client.connect()**?

```
JS index.js M X .gitignore {} package-lock.json
JS index.js > main > age
1 | const { MongoClient } = require('mongodb');
2 |
3 |
4 | async function main() {
5 |   const uri = "mongodb://localhost:27017/";
6 |   const client = new MongoClient(uri);
7 |
8 |   try {
9 |     // **Do NOT call await client.connect();**
10 |    const db = client.db("testDB");
11 |    const collection = db.collection("users");
12 |
13 |    // **Add this check before performing operations**
14 |    if (!client.topology || !client.topology.isConnected()) {
15 |      throw new Error("Client is not connected to MongoDB!");
16 |    }
17 |
18 |    await collection.insertOne({ name: "Anis Hafifza", age: 2002 });
19 |    console.log("Document inserted successfully.");
20 |  } catch (err) {
21 |    console.error("Error:", err.message);
22 |  } finally {
23 |    await client.close();
24 |  }
25 |
26 | main();
```

```
PS D:\UTeM\TAHUN 2-2\DATABASE\LAB1> node index.js
Error: Client is not connected to MongoDB!
PS D:\UTeM\TAHUN 2-2\DATABASE\LAB1>
```

3. MongoDB Connection Failure

Intentionally break the MongoDB connection string (e.g., change the port to 27018)

- What **error message** does NodeJS throw?

```
PS D:\UTeM\TAHUN 2-2\DATABASE\LAB1> node index.js
Error: MongoServerSelectionError: connect ECONNREFUSED ::1:27018, connect ECONNREFUSED 127.0.0.1:27018
    at Topology.selectServer (D:\UTeM\TAHUN 2-2\DATABASE\LAB1\node_modules\mongodb\lib\sdam\topology.js:321:38)
    at async Topology._connect (D:\UTeM\TAHUN 2-2\DATABASE\LAB1\node_modules\mongodb\lib\sdam\topology.js:200:28)
    at async Topology.connect (D:\UTeM\TAHUN 2-2\DATABASE\LAB1\node_modules\mongodb\lib\sdam\topology.js:152:13)
    at async topologyConnect (D:\UTeM\TAHUN 2-2\DATABASE\LAB1\node_modules\mongodb\lib\mongo_client.js:233:17)
    at async MongoClient._connect (D:\UTeM\TAHUN 2-2\DATABASE\LAB1\node_modules\mongodb\lib\mongo_client.js:246:13)
    at async MongoClient.connect (D:\UTeM\TAHUN 2-2\DATABASE\LAB1\node_modules\mongodb\lib\mongo_client.js:171:13)
    at async main (D:\UTeM\TAHUN 2-2\DATABASE\LAB1\index.js:9:9) {
  errorLabelSet: Set(0) {}
}
```

- What is the **exact text** of the error code (e.g., ECONNREFUSED)?

```
at InternalConnectMultiple (node:net:1197:10)
    at afterConnectMultiple (node:net:1712:7) {
  code: 'ECONNREFUSED',
  [errors]: [Array]
```

4. MongoDB Shell Query

Use the **MongoDB shell** (not Compass) to:

- List all documents in the testDB.users collection.
- What command did you use? Paste the **full output**.

```
PS D:\UTeM\TAHUN 2-2\DATABASE\LAB1> mongosh
Current Mongosh Log ID: 67da1fadd1329bb0b0b71235
Connecting to:      mongodb://127.0.0.1:27017/?directConnection=true&
serverSelectionTimeoutMS=2000&appName=mongosh+2.4.2
Using MongoDB:      8.0.5
Using Mongosh:      2.4.2

For mongosh info see: https://www.mongodb.com/docs/mongodb-shell/

    name: 'Anis Hafifza',
    age: 23
  }
]
testDB>
```

5. File System & Dependencies

- What is the **absolute path** to your project's package-lock.json file?
- What **exact version** of the mongodb driver is installed?

```
PS D:\UTeM\TAHUN 2-2\DATABASE\LAB1> (Get-Item package-lock.json).FullName
D:\UTeM\TAHUN 2-2\DATABASE\LAB1\package-lock.json
PS D:\UTeM\TAHUN 2-2\DATABASE\LAB1> npm list mongodb
lab1@1.0.0 D:\UTeM\TAHUN 2-2\DATABASE\LAB1
└─ mongodb@6.15.0
```

6. Troubleshooting Practice

Stop the MongoDB service and run the script.

- What error occurs?

```
Administrator: Windows PowerShell
Windows PowerShell
Copyright (C) Microsoft Corporation. All rights reserved.

Try the new cross-platform PowerShell https://aka.ms/pscore6

PS C:\Windows\system32> net stop MongoDB
The MongoDB Server (MongoDB) service is stopping.
The MongoDB Server (MongoDB) service was stopped successfully.

PS C:\Windows\system32>
```

```
[cause]: MongoNetworkError: connect ECONNREFUSED ::1:27017, connect ECONNREFUSED 127.0.0.1:27017

    at afterConnectMultiple (node:net:1712:7) {
```

- What command restarts the service?

```
PS C:\Windows\system32> net start MongoDB
The MongoDB Server (MongoDB) service is starting.
The MongoDB Server (MongoDB) service was started successfully.

PS C:\Windows\system32>
```

7. GitHub Repository Structure

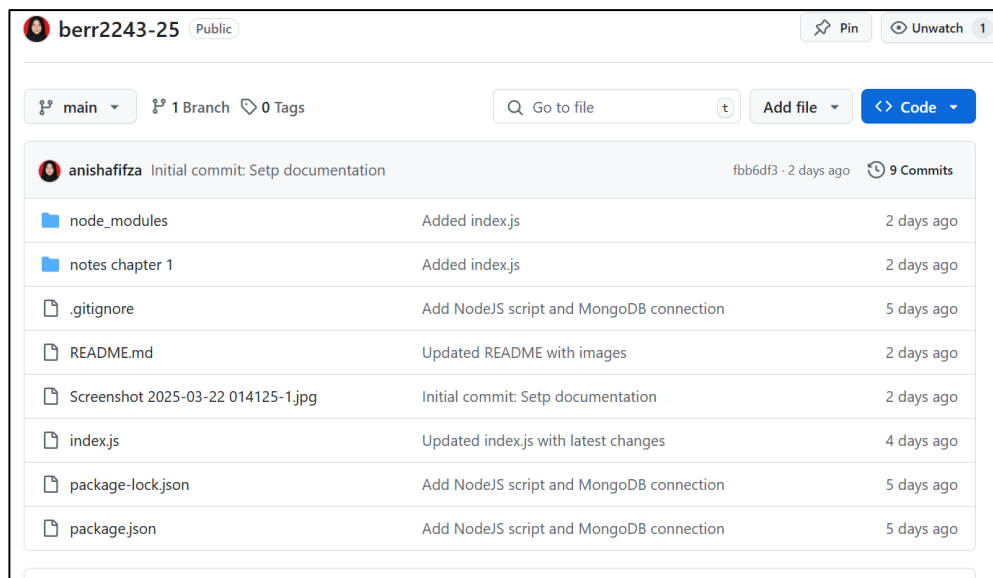

On GitHub, navigate to your repository's.

- What **timestamp** is listed for your last commit?

Commits on Mar 22, 2025

- How many files are present in this branch?

8. Performance Observation

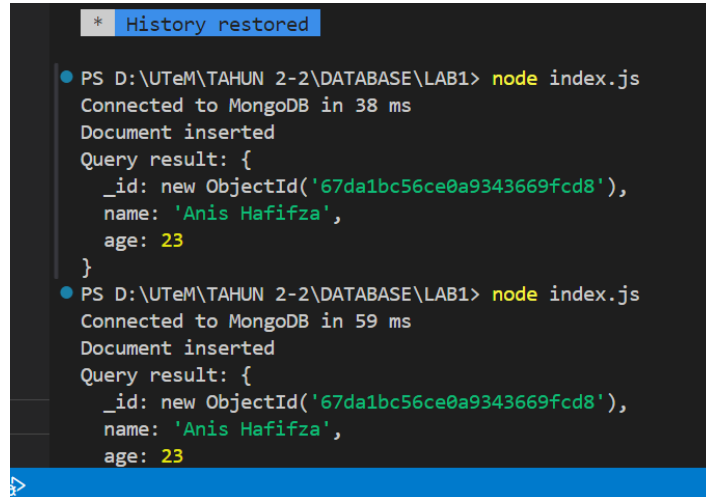

Time how long it takes for the script to print "Connected to MongoDB!".

- What is the **duration** (in milliseconds)?

```
PS D:\UTeM\TAHUN 2-2\DATABASE\LAB1> node index.js
Connected to MongoDB in 38 ms
Document inserted
Query result: {
  _id: new ObjectId('67da1bc56ce0a9343669fcd8'),
  name: 'Anis Hafifza',
  age: 23
}
PS D:\UTeM\TAHUN 2-2\DATABASE\LAB1>
```

- Does this time change if you run the script again? Why?

Yes, when I run the script again the duration for print “Connected to MongoDB” was changed because MongoDB server load for handling other requests.

```
* History restored

PS D:\UTeM\TAHUN 2-2\DATABASE\LAB1> node index.js
Connected to MongoDB in 38 ms
Document inserted
Query result: {
  _id: new ObjectId('67da1bc56ce0a9343669fcd8'),
  name: 'Anis Hafifza',
  age: 23
}

PS D:\UTeM\TAHUN 2-2\DATABASE\LAB1> node index.js
Connected to MongoDB in 59 ms
Document inserted
Query result: {
  _id: new ObjectId('67da1bc56ce0a9343669fcd8'),
  name: 'Anis Hafifza',
  age: 23
}
```

Exercise Questions

Answer :

1. Code Execution & Output

After running your index.js script:

-What exact text does the console display when the document is inserted?

Connected to MongoDB

-What `_id` value is automatically assigned to the document?

67db72396da84fe1a9b77067

```
Connected to MongoDB!
Document inserted
Query result: {
  _id: new ObjectId('67db72396da84fe1a9b77057'),
  name: 'Alice',
  age: 25
}
PS C:\Users\user\OneDrive\Desktop\database\LAB1>
```

2. Modify and Observe

Change the name field in index.js to your own name and the age to your birth year. Run the script again.

-What **new** `_id` is generated for this document?

67dca4640ad1279277dd7be3

```
PS C:\Users\user\OneDrive\Desktop\database\LAB1> node index.js
Connected to MongoDB in 25 ms
Document inserted
Query result: {
  _id: new ObjectId('67dca4640ad1279277dd7be3'),
  name: 'Ain Hidayah',
  age: 2002
}
```

-What error occurs if you forget to call **await client.connect()**?

```
1  const { MongoClient } = require('mongodb');
2
3  async function main() {
4    const uri = "mongodb://localhost:27017/";
5    const client = new MongoClient(uri);
6
7    try {
8      // *Do NOT call await client.connect();*
9      const db = client.db("testDB");
10     const collection = db.collection("users");
11
12     // *Add this check before performing operations*
13     if (!client.topology || !client.topology.isConnected()) {
14       throw new Error("Client is not connected to MongoDB!");
15     }
16
17     await collection.insertOne({ name: "Ain Hidayah", age: 2002 });
18     console.log("Document inserted successfully.");
19   } catch (err) {
20     console.error("Error:", err.message);
21   } finally {
22     await client.close();
23   }
24 }
25
26 main()
```

```
PS C:\Users\user\OneDrive\Desktop\database\LAB1> node index.js
Error: Client is not connected to MongoDB!
PS C:\Users\user\OneDrive\Desktop\database\LAB1>
```

3. MongoDB Connection Failure

Intentionally break the MongoDB connection string (e.g., change the port to 27018)

-What **error message** does NodeJS throw?

A connection failure “MongoServerError: connect ECONNREFUSED 127.0.0.1:27018”

```
PS C:\Users\user\OneDrive\Desktop\database\LAB1> node index.js
Error: MongoServerError: connect ECONNREFUSED ::1:27018, connect ECONNREFUSED 127.0.0.1:27018
at Topology.selectServer (C:\Users\user\OneDrive\Desktop\database\LAB1\node_modules\mongodb\lib\sdam\topology.js:321:38)
at async Topology.connect (C:\Users\user\OneDrive\Desktop\database\LAB1\node_modules\mongodb\lib\sdam\topology.js:280:28)
at async MongoClient.connect (C:\Users\user\OneDrive\Desktop\database\LAB1\node_modules\mongodb\lib\mongo_client.js:233:17)

8. Performance Observation

Time how long it takes for the script to print "Connected to MongoDB!".

-What is the **duration** (in milliseconds)?

22ms

```
PS C:\Users\user\OneDrive\Desktop\database\LAB1> node index.js
Connected to MongoDB in 22 ms
Document inserted
Query result: {
  _id: new ObjectId('67dca4640ad1279277dd7be3'),
  name: 'Ain Hidayah',
  age: 2002
}
```

-Does this time change if you run the script again? Why?

Yes, it can be faster or slower after the initial connection because of the caching

```
PS C:\Users\user\OneDrive\Desktop\database\LAB1> node index.js
Connected to MongoDB in 22 ms
Document inserted
Query result: {
  _id: new ObjectId('67dca4640ad1279277dd7be3'),
